- 15 x **UB-6-EV** - Standard Detector Base

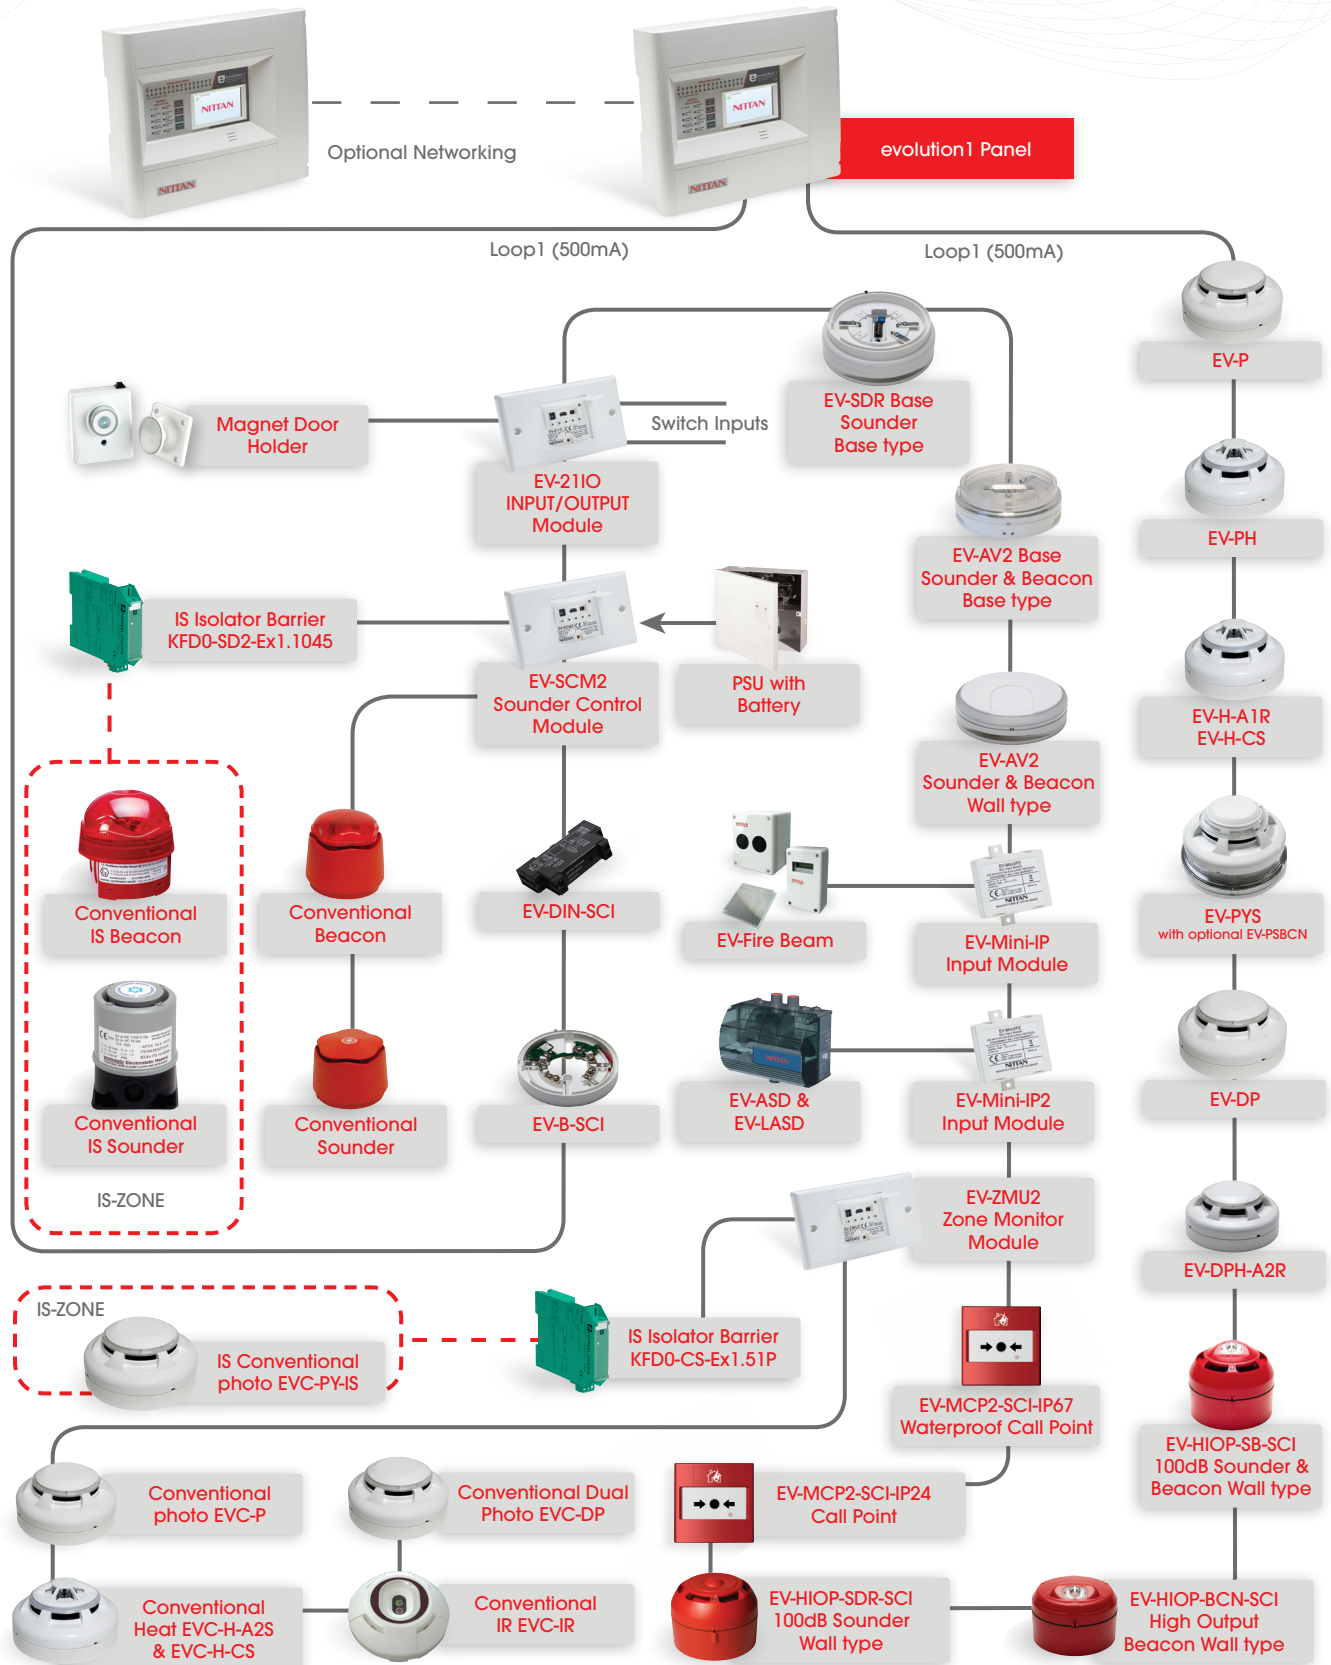

For simplicity each Nittan Evolution Small Install kit comes complete with a small selection of components suitable to provide a simple fire alarm system.

For ease of choice the kit is available in two variants, each comes complete with an evolution1 panel plus either 10 or 19 devices.

Each kit can be used as a small system, or a core to which additional devices from the evolution range can be added up to a maximum of 254 devices (subject to loop calculations and site conditions), providing a comprehensive single loop system.

The evolution1 built-in network card also allows connection of up to 16 panels for larger systems.

# System Example

## Note

- All panels are network enabled as standard
- Panel batteries not included.
- Nittan address programmer required
